Section 2

° The calculated bills shown in Tables 1 and 2 are based on rates contained in Section 1 and therefore do not include the Rural Rate assistance.

° The calculated bills for 2.5 kW in Table 2 are no longer shown as the small commercial rate at this level is virtually non-existent. The general bills for over 500 kW for the municipality of Forest are based on the restricted hour rate.

° Graph 1 presents trends in the average bills of the residential rate class for low and medium energy use. Graph 2 presents the trend in the residential class end rate ¢ per kW.h. This trend represents the average end rate of the 319 municipalities, each weighted by its customers in the residential class.

° Graphs 3 to 16 show distributions of the 319 municipalities according to the bill size for each of the comparative bills reported. The median is defined as the value for the middle utility, ie., 50 per cent of the utilities have a value greater than the median, and 50 per cent a value lower. The average is the arithmetic average of the comparative bills of the 319 municipal utilities. The weighted average is obtained by multiplying the comparative bill of each of the 319 municipal utilities by its customers in the rate class, and dividing the sum of these weighted bills by the total number of customers in the rate class.
